

Record tablecasts directly from your iPad

If you have an iPad with iOS 11 or versions that are more recent, it is quick and easy to record tablecasts of whichever apps you want to use in your presentation.

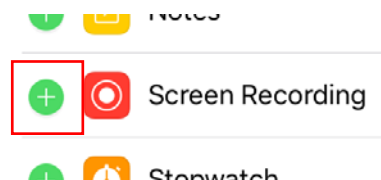

- 1 First, you need to enable screen recording. Go to *Settings* with the menu that resembles a cogwheel.

- 2 In the *Control Centre* 1 press *Customise Controls* 2.

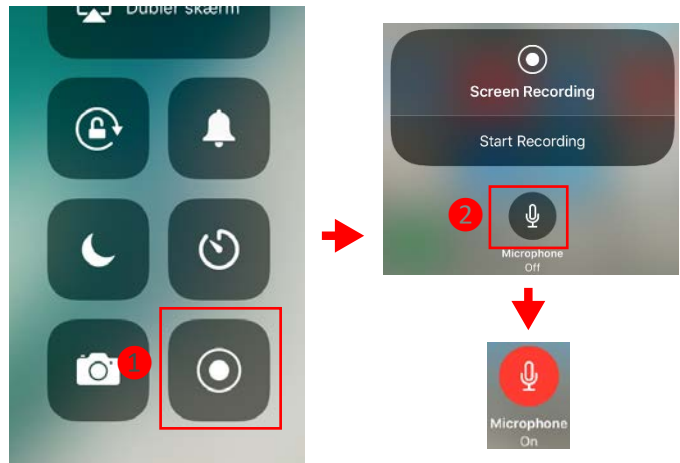

- 3 Press the green plus sign next to *Screen Recording*.

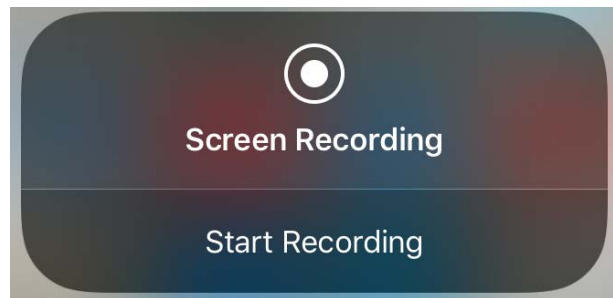

Remember to enable microphone recording if you wish to record sound.

- 4 Go back to the desktop and swipe your finger from the bottom of the screen and up. Press and hold the screen-recording icon 1 for a few seconds. Press the microphone icon 2 to enable sound recording 2.

- 5 Press *Start Recording*. It takes three seconds for the recording to begin.

If you have several screen recording programmes on your iPad, you will be asked to select which one you wish to use.

Camera Roll stores recordings in your photo library.
